COMPANY PROFILE · 2026

# Caishen *Resources*

A Malaysian palm oil trading house. We source and export  
Crude Palm Oil from mills throughout Malaysia.

CRUDE PALM OIL · CPO

EST 2024 · WWW.CAISHENRESOURCES.COM

## ABOUT

# A palm oil trading house, *built around CPO.*

Caishen Resources is a Malaysian commodity trading house specialising in Crude Palm Oil. We work with MPOB-licensed mills throughout Malaysia and supply refineries, traders and processors locally and internationally.

Our office in Johor Bahru sits next to Port of Tanjung Pelepas and Singapore's deep-water terminals, which gives us a logistics advantage on export cargoes. Domestically, we deliver to refineries across the peninsula.

## *What we focus on*

Reliable supply from licensed mills. Clean documentation on every shipment. Quick turnaround on quotes and orders. The basics, done properly.

### RELIABILITY

Licensed and documented on every shipment we move.

### DISCIPLINE

Specs agreed in writing before loading. No surprises at port.

### REACH

Mill to buyer, both locally in Malaysia and internationally.

## CREDENTIALS

# Licensed by the *Malaysian Palm Oil Board*.

MPOB regulates all palm oil activity in Malaysia. We hold both licences required to trade and export from Malaysian origin.

## LICENCE NUMBER

## 624038017000

Issued under Categories **DL** (Dealer Licence) and **PX** (Export Licence). These authorise Caishen Resources to deal in and export palm oil products from our licensed premises in Johor Bahru.

## DL

### Dealer Licence

Authorises us to buy CPO from licensed mills and sell to local refineries, processors and traders.

## PX

### Export Licence

Authorises us to export CPO from Malaysia to overseas refineries, traders and end-users.

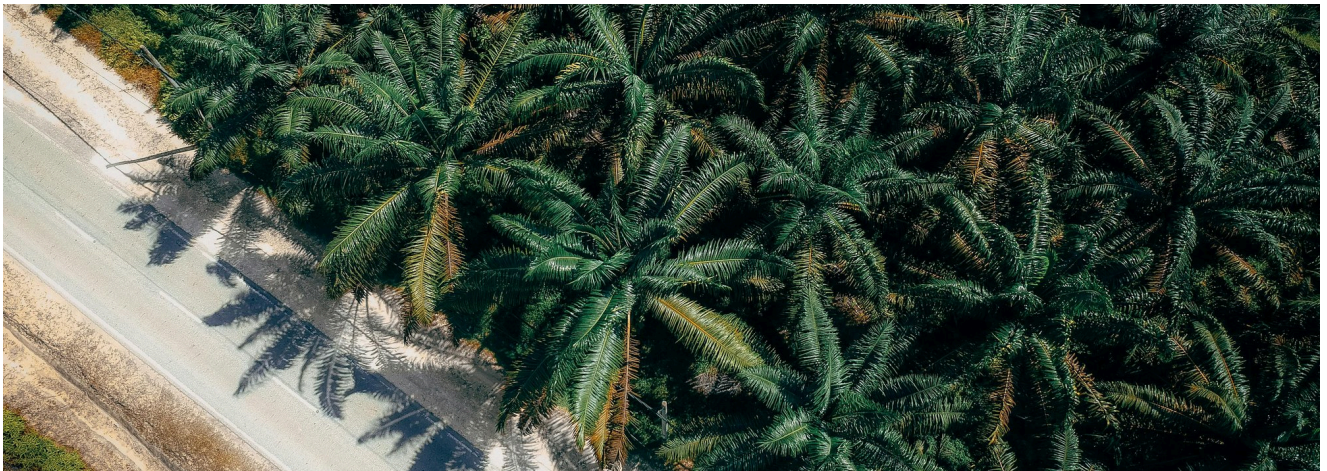

*Holding both DL and PX means we can move volume in either direction. One week we source for a local refinery, the next we ship a parcel overseas.*

Every consignment is documented and declared under MPOB. Our paperwork holds up at the loading port, at customs in the destination country, and in customer audits.

THE FLOW

# From Malaysian mills *to the world.*

PLANTATION · MALAYSIAN OIL PALM AT HARVEST

Malaysia produces about a quarter of the world's palm oil. The chain starts with fresh fruit bunches at the plantation, moves through the mill where they're processed into Crude Palm Oil, and ends at refineries that turn CPO into cooking oils, food fats and oleochemicals. We trade at the middle of that chain, moving CPO from mills to the refineries or buyers that want it.

Our role is step 03. We source CPO from Malaysian mills and place it with the right buyer, locally or internationally.

## PRODUCT

# Crude Palm Oil, *to your spec.*

CPO LOADING · BULK TANKER AT THE MILL

Sourced from MPOB-licensed mills throughout Malaysia. Supplied locally to refineries or shipped as bulk cargo to international buyers. Specifications agreed before loading.

## Standard CPO specifications

PARAMETER	RANGE / METHOD	NOTES
Free Fatty Acid (FFA)	≤ 5.0% (as palmitic)	Tightened on request to ≤ 4.0%
Moisture & Impurities (M&I)	≤ 0.25%	Standard MPOB grade
Iodine Value (IV)	50 – 55 (Wijs)	Typical Malaysian CPO range
DOBI	≥ 2.3	Refining quality indicator
Melting Point	33 – 39 °C	Standard CPO profile
Origin	Peninsular Malaysia	MPOB-licensed mills only

buyers

ENGAGEMENTS

# Two ways to *work with us.*

We trade Crude Palm Oil in two lanes: local supply to Malaysian refineries and processors, and export to international buyers by vessel parcel, ISO tank or flexitank.

## 01

### Local Mill & Refinery Supply

We supply CPO from MPOB-licensed mills directly to Malaysian refineries, processors and traders. Truck-load or parcel deliveries, tested and documented under our DL licence.

#### TYPICAL BUYERS

Malaysian refineries, oleochemical plants, downstream processors, domestic traders.

## 02

### International CPO Export

We ship CPO cargoes overseas to refineries, traders and processors. Vessel parcel for bulk volume, ISO tank or flexitank for container quantities. Documentation, certification, chartering and port handling all coordinated in-house.

#### TYPICAL BUYERS

Overseas refineries, global commodity traders, regional processors, industrial buyers.

LOADING BAY · TANKER TRUCKS AT THE MILL

*Tell us what you need: volume, spec, port, timing. We'll work back from there.*

## WHAT SETS US APART

# Why work with *Caishen Resources*.

## AI-Assisted Pricing & Routing

We watch CPO futures and FOB curves with our own pricing tools, and use routing software to find the cheapest container path to your port. It sharpens our quotes and shortens the time between enquiry and offer.

## Strategically Positioned in Johor

Our office in Johor Bahru sits next to Port of Tanjung Pelepas and Singapore's deep-water terminals. Cargoes get more carrier options and better freight rates than from less-connected ports.

## Direct Mill Relationships

We work mill-to-buyer throughout Malaysia. No middlemen between origin and offer. Specs are checked at loading, prices are quoted from the gate.

## Owner-Led, Founder-Run

You speak with the partners who own the trade, not someone passing your enquiry up a chain. Decisions happen in hours, not weeks.

## Documentation Discipline

Every parcel comes with full paperwork: CoA, bill of lading, phytosanitary, certificate of origin. Holds up at the loading port, in the destination country, and in your own audits.

## RESPONSIBLE SOURCING

# Sourcing *standards.*

Palm oil is more land-efficient than soy, sunflower or rapeseed. Sourced from licensed mills and properly documented, it's a commodity we can stand behind. We do the work to make sure ours is.

## MSP0 & Industry Standards

We source from MPOB-licensed mills operating under MSP0 certification. MSP0 is the national mandatory standard covering legality, environment and labour practices.

## Traceability to the Mill

Every CPO parcel is traceable back to its mill of origin. If you need chain-of-custody documentation, certificates of analysis or third-party verification, we provide it as standard.

## Quality Assurance

We test to MPOB grade specifications: Free Fatty Acid (FFA), Moisture & Impurity (M&I), Iodine Value (IV), Deterioration of Bleachability Index (DOBI). Specs are agreed in writing and documented at loading.

## Continuous Improvement

We're working toward RSPO membership and ISCC EU compliance for clients exporting into European biofuel and food-grade markets.

### *If something goes wrong*

If something goes off on a shipment, call us. We'd rather hear about it from you early than find out at the destination port.
